# 3. 製作todos lists 工具

## 功能說明:

- 1. 輸入代辦事項點擊新增或enter鍵後會新增資料並顯示於下方list-group
- 2. 完成事項check勾選後移至進行中或已完成
- 3. 點擊右方刪除鈕可刪除資料
- 4. 快速點擊兩下可以編輯資料, enter完成編輯, esc放棄並放棄編輯
- 5. 點擊nav "全部" "進行中" "已完成" 會顯示不同代辦事項
- 6. 即時顯示未完成任務的比數
- 7. 清除所以任務

#### 1. 基本架構

## input-group

### card-header

# card-body

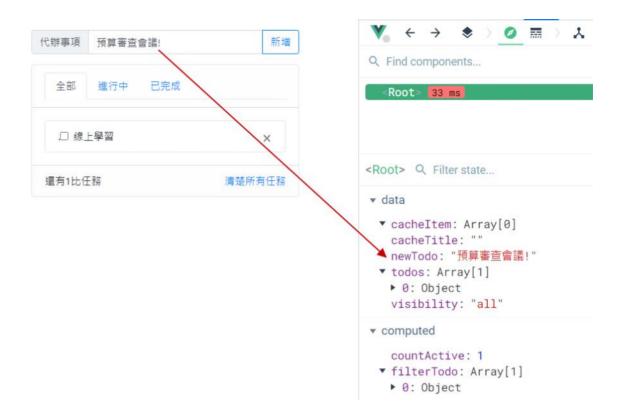

```
<div class="card-body">
   <div class="d-flex">
             <div class="form-check">
                <input class="form-check-input" type="checkbox">
                <label class="form-check-label" >
                    代辦事項
                </label>
             </div>
             <button type="button" class="close ml-auto" aria-label="Close">
                <span aria-hidden="true">&times;</span>
             </button>
         </div>
        <input type="text" class="form-control">
```

#### card-footer

2. Vue 架構 - 綁定 input

```
<script>
    const App = {
        data() {
            return {
                newTodo: '預算審查會議!',
                visibility: 'all',
                cacheTitle: '',
                cacheItem: [],
                todos: [
                    {
                        id: '001',
                        title: '線上學習',
                        completed: false,
        methods: { ···
        computed: { ···
   Vue.createApp(App).mount('#app');
</script>
```

## 綁定 input

3. 新增至todos 並以v-for將資料顯示出

```
methods: {
    addTodo() {
        const timestamp = Math.floor(Date.now());
        const value = this.newTodo.trim();
        if(!value){
            return;
        this.todos.push({
            id: timestamp,
            title: value,
            completed: false
        });
        this.newTodo = '';
    },
    removeTodo(todo) { …
    editTodo(item) { ···
    cancelTodo() { ...
    doneTodo(item) { ...
    destory() { ···
},
```

#### 監聽觸發事件

#### v-for將資料顯示出

#### 4. 刪除事件

```
removeTodo(todo) {
    const vm = this;
    var newIndex = vm.todos.findIndex((item, index) => {
        return todo.id === item.id
    });

vm.todos.splice(newIndex, 1);
},
```

#### 5. 删除線

## 判斷checkbox是否有選取來決定是否套用class

```
.completed{
    text-decoration: line-through;
    color:    crimson;
}
</style>
```

# 必須綁定checkbox 與item.completed

6. 切換nav與顯示的資料

## 需搭配 visibility 來計入目前顯示的類型!

## 使用computed 建立 filterTodo 回傳過濾的資料結果!

```
computed: {
    filterTodo() {
        const vm = this;
        if(vm.visibility === 'all'){
            return vm.todos;
        }else if(vm.visibility === 'active'){
            const activeTodo = [];
            vm.todos.forEach((item, key) => {
                if(!item.completed){
                    activeTodo.push(item);
                }
            });
            return activeTodo;
        }else if (vm.visibility === 'completed') {
            const activeTodo = [];
            vm.todos.forEach((item, key) => {
                if (item.completed) {
                    activeTodo.push(item);
            });
            return activeTodo;
        }
    },
    countActive() { ···
```

更新v-for 資料

#### 7. 編輯代辦事項

#### 利用cacheTitle和cacheItem來製作編輯的狀態與功能

```
editTodo(item) {
    this.cacheItem = item;
    this.cacheTitle = item.title;
},
cancelTodo() {
    this.cacheTitle = '';
    this.cacheItem = '';
},
doneTodo(item) {
    item.title = this.cacheTitle;
    this.cacheTitle = '';
    this.cacheItem = '';
},
```

#### 監聽與判斷事件

```
class="list-group">
    class="list-group-item" v-for="(item, key) in filterTodo">
         <div class="d-flex" v-if="item.id != cacheItem.id">.
             <div class="form-check">
                 <input type="checkbox" class="form-check-input" v-model="item.completed">
<label class="form-check-label" :for="item.id"</pre>
                     :class="{'completed' : item.completed}" @dblclick="editTodo(item)">
                     {{ item.title }}
                 </label>
             </div>
             <button type="button" class="close ml-auto" data-dismiss="modal" aria-label="Close"</pre>
             @click="removeTodo(item)">
             <span aria-hidden="true">&times;</span>
</button>
        </div>
        <input type="text" name="" id="" class="form-control"</pre>
            v-if="item.id === cacheItem.id"
             @keyup.esc="cancelTodo"
             v-model="cacheTitle"
             @keyup.enter="doneTodo(item)">
```

#### 8. 計算代辦事項

```
countActive() {
    Let active = 0;
    this.todos.forEach((item, key) => {
        if(!item.completed){
            active ++;
        }
    });
    return active;
}
```

## 9. 清除所有任務

```
destory() {
   this.todos = [];
},
```
